

SANTOSH KUMAR

Senior Frontend Engineer | React.js · TypeScript · Next.js | Generative-AI SaaS
Bengaluru, Karnataka, India | +91 93807 33438 | santoshkumar95432@gmail.com
LinkedIn | GitHub

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5+ years of experience building production-grade web applications with React.js, TypeScript, Next.js and Redux Toolkit. Founding frontend engineer of AIRllab, a generative-AI design and visualization SaaS for architects and designers, owning its React frontend for 3.5+ years across teams in India, China and the US. Specialist in GenAI product interfaces: image generation, inpainting, upscaling, image-to-video, real-time job tracking over WebSocket/SignalR, and AI-assisted Figma-to-code delivery. Led a team of 6–8 frontend developers delivering applications for US, UK and Indian clients in regtech, edtech, eldercare, legaltech and government.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS/Sass, JSX

Frameworks & State: React.js (Hooks, Context API, custom hooks), Next.js (SSR/SSG), Redux, Redux Toolkit, React Router

UI Engineering: Ant Design, reusable component libraries, design systems, responsive and mobile-first design, Figma-to-code, cross-browser compatibility, web accessibility (WCAG 2.1)

APIs & Real-time: REST APIs, Axios, WebSocket, SignalR, JSON, SSO / OAuth 2.0, JWT authentication, file/image upload pipelines

Performance: Code splitting, lazy loading, memoization (React.memo, useMemo, useCallback), image optimization, Lighthouse, Core Web Vitals

Testing & Quality: Vitest, Cypress (E2E), ESLint, Prettier, code reviews, debugging with Chrome DevTools

AI-Assisted Development: Figma MCP design-to-code workflows, GitHub Copilot, GenAI product UX

Tools & Delivery: Git, GitHub, npm, Vite, Vercel, Postman, Jira, Agile/Scrum

PROFESSIONAL EXPERIENCE

AIRI Lab (AIRllab) — Shenzhen, China (Remote)

Jul 2025 – Present

React.js Frontend Developer (Contract)

Generative-AI design and visualization platform for architecture, interior, landscape and urban design.

- Hired directly by AIRI Lab after 2.5 years on the product through Promena; senior-most frontend engineer, owning frontend architecture, feature delivery, releases and production support.
- Build and ship end-to-end GenAI workflows (sketch/floor-plan-to-render, inpainting, object insertion, image extension, atmosphere changes, 8 MP upscaling and image-to-video) with React, TypeScript, Redux Toolkit, SCSS and Ant Design.
- Engineered real-time generation tracking over WebSocket/SignalR with job queuing, progress states, retries and skeleton loaders for long-running GPU inference, giving users clear status on multi-minute render jobs.
- Translate Figma designs into production components using Figma MCP-assisted design-to-code workflows, shortening the handoff cycle between design and production release.
- Implemented SSO login and secure image-upload flows (type, size and dimension validation, previews, progress and error recovery) across the platform's authentication and asset-upload APIs.
- Collaborate daily with AI/ML and product teams in China and backend/DevOps teams in India to define API contracts for new model features; led knowledge transfer and codebase handover to the in-house engineering team.

Front-End Web Developer*Client engagement: AIRI Lab — Founding Frontend Engineer**Jan 2023 – Jul 2025*

- First frontend engineer on AIRI Lab: set up the React + TypeScript codebase from scratch, including project architecture, Redux state management, routing, theming and a reusable component library.
- Built the core product surfaces: authentication, project workspace dashboard, AI render studio (upload → style/typology → prompt → generate → compare → download), render history and gallery.
- Optimized high-resolution image galleries with lazy loading, progressive previews and code splitting, keeping render-heavy pages responsive on mid-range devices.
- Built working domain knowledge of architectural visualization (render typologies, styles, sketch-to-render pipelines) by working directly with architect founders and AI researchers.

Team leadership and client delivery

- Progressed from intern to leading a team of 6–8 frontend developers: sprint planning, estimation, code reviews, pull-request standards and mentoring junior developers.
- Delivered React.js and Next.js applications for clients in the US, UK and India across regtech, edtech, eldercare, legaltech/blockchain, government and industrial domains.
- Standardized shared component patterns, ESLint/Prettier rules and Git workflow across projects, cutting duplicated UI code and making handovers between developers routine.
- Owned release readiness through Cypress E2E tests, cross-browser validation and defect triage with QA and backend teams.

KEY PROJECTS (delivered at Promena)

ProScore — Austin, Texas, USA | React.js, TypeScript, SCSS, REST APIs, Cypress

Regtech SaaS for workforce compliance under the US Inflation Reduction Act: prevailing-wage verification, apprenticeship ratio tracking and real-time compliance reporting. Built data-heavy dashboards, validated compliance forms, API-driven data views and Cypress E2E coverage.

Infyni — India | React.js, JavaScript, SCSS, REST APIs

Live, instructor-led online learning platform with 100,000+ enrolled learners. Built course discovery, enrollment, learner and instructor interfaces, forms and API integrations.

Yozoi — London, UK | React.js, JavaScript, SCSS

On-demand home-care platform for senior citizens with sensor-based remote wellbeing monitoring. Built mobile-first service-booking flows, user profiles and monitoring dashboards.

ContractMint — USA | React.js, JavaScript, SCSS

Legal-tech platform for creating and requesting legal agreements, with signed documents preserved on the Polygon blockchain. Designed and built contract selection, document workflow and signing screens, and owned UI quality assurance.

BSNL Aadhaar Operators Reporting Tool — Delhi, India | React.js, JavaScript, SCSS

Government reporting portal for Aadhaar operators covering account statements, balances, recharges and operational reports, built with filterable data tables and forms.

Engimach — India | React.js, JavaScript, SCSS

Website for an engineering, machinery and machine-tools exhibition. Built responsive page layouts, navigation and reusable content sections.

EDUCATION

B.Sc. Computer Science — Vijayanagara Sri Krishnadevaraya University (VSKU), Ballari, Karnataka
